Reactor safety
  evaluation of emergency core-cooling system, 31
Reactor Standards Division
  establishment and functions of, 32
Reactor transient analysis
  coarse-mesh few-group approximations for, 178–79
  experiments on, 186–91
  nodal-coupled-core methods for, 185–86
  nodal-synthesis methods for, 179–85
  numerical integration methods for, 175–78
  quasi-static methods for, 172–75
Reactors
  malfunctions in, monitoring of neutron flux, temperature, vibration, sound, strain, pressure flow, and gamma flux for detection of, 354–64
  seminar on numerical calculations for, 236
Reactors (Big Rock Point)
  fuel development, 87, 89
  fuel performance, 82, 85–86
Reactors (boiling water)
  off-gas system, 35
  pressure-relief devices, 33
  Zircaloy-clad UO_2 fuel, design and performance of, 68–97
Reactors (Brunswick 1)
  coolant system, in-service inspection of, 64
Reactors (Brunswick 2)
  coolant system, in-service inspection of, 64
Reactors (Carolinas–Virginia Tube)
  containment-response and heat-transfer results from a simulated design-basis accident for, 33–34
Reactors (Connecticut Yankee)
  coolant-activity problem, 34–35
  coolant system, in-service inspection of, 64
  description of, 7
  highlights of at-power operation, 10–19
  low-power and approach-to-power operations, 8–10
  maintenance and repairs from July 1967 through September 1970, 19–27
  operating experience, 136–38
  prestartup operations, 7–8
Reactors (CVTR)
  fuel development, 93
Reactors (Davis–Besse)
  steel containment vessels for, 34
Reactors (Dresden 1)
  coolant system, in-service inspection of, 58–62
  fuel performance, 82–84
Reactors (Dresden 2)
  operating experiences from startup through 1970, 225–31
Reactors (EBR-II)
  design, construction, and operation, review of, 286–310
  fuel preparation for, 35
  in-line vacuum-distillation sodium sampler, 36
  sodium pumps, operating experience with, 35
Reactors (Elk River)
  coolant system, in-service inspection of, 62–63
Reactors (fast breeder)
  development of fuel elements for, 36
  fuel-element technology, summary of conference on, 241–53
  radiation-induced embrittlement of fuel claddings for, methods of reducing, 217–22
  radiation-induced swelling of fuel claddings for, methods of reducing, 213–17
Reactors (Fast Test)
  sodium-flow tests, 36
Reactors (Fermi 1)
  current status of operations, 39–41
  operating experiences from mid-July, 1970 through December 1970, 233–36
Reactors (foreign)
  coolant system, in-service inspection of, 64
Reactors (Fort St. Vrain)
  prestressed-concrete pressure vessel for, 35
Reactors (Garigliano)
  fuel performance, 82, 84
Reactors (gas-cooled, fast)
  loss-of-coolant accidents, 34
  special development problems, 34
Reactors (GETR)
  fuel development, 86–89
Reactors (Ginna)
  operating experience, 139–44
Reactors (Halden)
  fuel development, 87, 89–91
Reactors (high-temperature gas cooled)
  bypass helium-purification system for, 34
  coated-particle type fuel for, 34
  helium circulators for, 34
  once-through steam generators for, 34
  prestressed-concrete pressure vessels for, 34
  remote fuel-handling equipment for, 34
Reactors (Humboldt)
  fuel performance, 82, 84–85
Reactors (Hutchinson Island)
  steel containment vessels for, 34
Reactors (Indian Point 1)
  coolant system, in-service inspection of, 63–64
Reactors (Indian Point 2)
  quality-assurance program, 31
Reactors (Indian Point 3)
  quality-assurance program, 31
Reactors (JPDR)
  fuel performance, 82, 86
Reactors (KAHL)
  fuel performance, 82, 84
Reactors (KRB)
  fuel performance, 82, 85
Reactors (La Crosse)
  coolant system, in-service inspection of, 63
Reactors (Limerick)
  steel containment vessels for, 34
Reactors (LMFBR)
  core-coolant and secondary systems for, materials and reliability problems with, 34
  development, materials problems in, 36
  fuel-element technology, summary of conference on, 241–53
  in-core instrumentation, 32
  in-core self-powered fast-neutron monitors for, 32
  RDT Standards Program, 31
  reactivity monitoring, review of meters based on analysis of the neutron fluctuations for, 349–50
  reactivity monitoring, review of meters based on the solution of reactor-kinetics equations for, 346–48
  subcritical measurements in, review of of methods for, 350–52
  Westinghouse demonstration plant, control system for, 32
Reactors (molten-salt breeder)
  characteristics of, 36
  control characteristics of, 32
  development, 34
  tritium production and distribution in, 335–41
Reactors (Molten-Salt Reactor Experiment)
  operating experience, 34
  tritium production and distribution in, 336–38
Reactors (Nine Mile Point)
  operating experience, 146–50
Reactors (N. S. Savannah)
  refueling, 35
Reactors (power)
  commissioning, testing program for, 198–209
  coolant systems, in-service inspection of, 44–66
  design basis for the protection and activator systems of, 32–3
  emergency core-cooling system, 31
  quality-assurance program, 30–31
  systems and components of, summary of conference on, 30–36
Reactors (Prairie Island)
  radioactive-filter-handling facility for, 33
Reactors (pressurized water)
  carbon-steel and stainless-steel pipes, experimental bending tests of, 31
  coolant radiation-monitoring system for, 33
  core support structures, dynamic evaluation of, 31
  equipment-support design for an 800-MW(e), 31
  hydrogen generation under design-basis-accident conditions, computer program for determination of, 31
  hydrogen-recycle system for, 33
  in-service inspection program for, 30
  once-through steam generator for, 33
  pipe rupture in an 800-MW(e), dynamic effects on component supports resulting from, 31
  pressure-relief devices, 33
  safety- and relief-valve experience, 35
Reactors (PRTR)
  fuel development, 90, 92
Reactors (Saxton)
  fuel development, 90, 92
Reactors (SEFOR)
  operating experience, 152–55
  operating experiences from August 1970 through January 1971, 237–40
  physical characteristics, 155–65
Reactors (Sequoyah)
  steel containment vessels for, 34
Reactors (Shoreham)
  steel containment vessels for, 34
Reactors (Tarapur)
  fuel performance, 82, 86
Reactors (VBWR)
  fuel development, 86–87
Reactors (Westinghouse LMFBR Demonstration Plant)
  control system for, 32
Reactors (WTR)
  fuel development, 92–93
Reactors (Yankee)
  coolant system, in-service inspection of, 57–58

Reactors (Zimmer)
steel containment vessels for, 34
Remote handling equipment
for reactor fuels, 35

S

Seminars
on numerical reactor calculations, 236
Sound
monitoring in reactors for detection of malfunctions, 359–60
Stainless steel
radiation creep, 258–82, 316–17
radiation-induced swelling and embrittlement of, methods of reducing, 213–17
Strain
monitoring in reactors for detection of malfunctions, 360
Symposia
on analytical methods in the nuclear fuel cycle, 135

T

Temperature
monitoring in reactors for detection of malfunctions, 357–58
Testing
program for commissioning of nuclear power plants, 198–209
Testing (nondestructive)
of reactor fuels by neutron radiography, 1–6
Thorium oxide (ThO_2)
out-of-pile creep behavior, 113–15
Thorium oxide systems (ThO_2–UO_2)
in-pile mechanical properties of, 331–32
out-of-pile creep behavior, 118–19
Tritium
disposal from molten-salt reactors, 341
production and distribution in molten-salt reactors, 335–41

U

Ultrasonics
use in in-service inspection of reactor coolant systems, 51–57
use in in-service inspection of reactor pressure vessels, 30
Uranium
radiation creep, measurement technology, 326, 328–29
Uranium carbide (UC)
in-pile creep behavior, 132–33
out-of-pile creep behavior, 121–25
radiation creep, 326–28
Uranium nitride (UN)
out-of-pile creep behavior, 125–27
Uranium oxide (UO_2)
in-pile creep behavior, 128–32
in-pile mechanical properties of, 331–32
out-of-pile creep behavior, 99–113
radiation creep, 323–26, 328–31
Uranium oxide (UO_2)(Zircaloy clad)
use in boiling-water reactors, design and performance of, 68–97
Uranium oxide systems (BeO–UO_2)
out-of-pile creep behavior, 121
Uranium oxide systems (PuO_2–UO_2)
out-of-pile creep behavior, 115–18
radiation creep, measurement technology, 326, 328–29
Uranium oxide systems (ThO_2–UO_2)
in-pile mechanical properties of, 331–32
out-of-pile creep behavior, 118–19
Uranium oxide systems (UO_2–ZrO_2)
in-pile mechanical properties of, 331–32
out-of-pile creep behavior, 119–21

V

Vibrations
monitoring in reactors for detection of malfunctions, 358–59

W

Welding (explosive)
use in plugging leaky heat-exchanger tubes, 35

Z

Zirconium oxide systems (UO_2–ZrO_2)
in-pile mechanical properties of, 331–32
out-of-pile creep behavior, 119–21
